

Product Name: TaskFlask

Team Name: The Goatz

Sprint Completion Date: July 14, 2026

Revision Number: 2.0

Revision Date: July 10, 2026

Goal

Build the core task tracking workflow.

User Stories and Tasks

User Story 1

As a user, I want to create tasks inside a sprint, so that sprint work can be broken down. [3]

- Add the tasks table and sprint relationship to the database schema. (2 hours)
- Write tests for valid and invalid task creation. (2 hours)

User Story 2

As a user, I want to edit task title, description, status, priority, assignee, and due date, so that details of tasks can remain accurate. [3]

- Create a database query for updating task information. (2 hours)
- Validate edited task information before saving it. (1 hours)
- Write tests for task editing and invalid values. (2 hours)

User Story 3

As a user, I want to delete tasks, so that I can remove tasks that are not needed. [2]

- Create the delete-task backend route. (1 hour)
- Update board counts and story-point progress after deletion. (2 hours)

User Story 4

As a user, I want to move a task between To Do, In progress, and Done, so that task progress is tracked. [3]

- Create valid drop zones for all three status columns. (2 hours)
- Record a completion date when a task moves to Done. (1 hour)

User Story 5

As a user, I want to view tasks grouped into simple status columns, so that I can more quickly see that needs to be started, continued, or what is already complete. [2]

- Create the three board columns: To Do, In Progress, and Done. (1 hours)
- Display each task as a card with its priority, story points, title, assignee, and dates. (2 hours)

User Story 6

As a user, I want to filter tasks by assignee, priority, or status, so that certain tasks are more easily found. [3]

- Add assignee, priority, and status controls to the filter form. (2 hours)
- Create database filtering logic using parameterized SQL queries. (2 hours)
- Write tests for individual and combined filters. (2 hours)

Team Roles

Ian Keilman: Product Owner, Frontend
Faizan Idrees: Scrum master, Testing, Documentation
Karen Gurovith: Frontend, Backend
Kunwarpal Singh: Frontend, Backend
Minh La: Database, Backend

Initial Task Assignment

Ian Keilman

- Create a task creation form for adding tasks inside a sprint.
- Help define task fields like title, description, status, priority, assignee, and due date.
- Work on the frontend layout for adding and viewing tasks.

Karen Gurovith

- Add filtering logic for assignee, priority, and status.
- Help connect backend task data to frontend.
- Make styling on pages consistent with the whole design.

Kunwarpal Singh

- Build the frontend for editing and deleting tasks.
- Connect edit and delete button to the backend routes.
- Help display tasks in the correct status columns.
- Create backend routes for moving tasks between To Do, In Progress, and Done.

Minh La

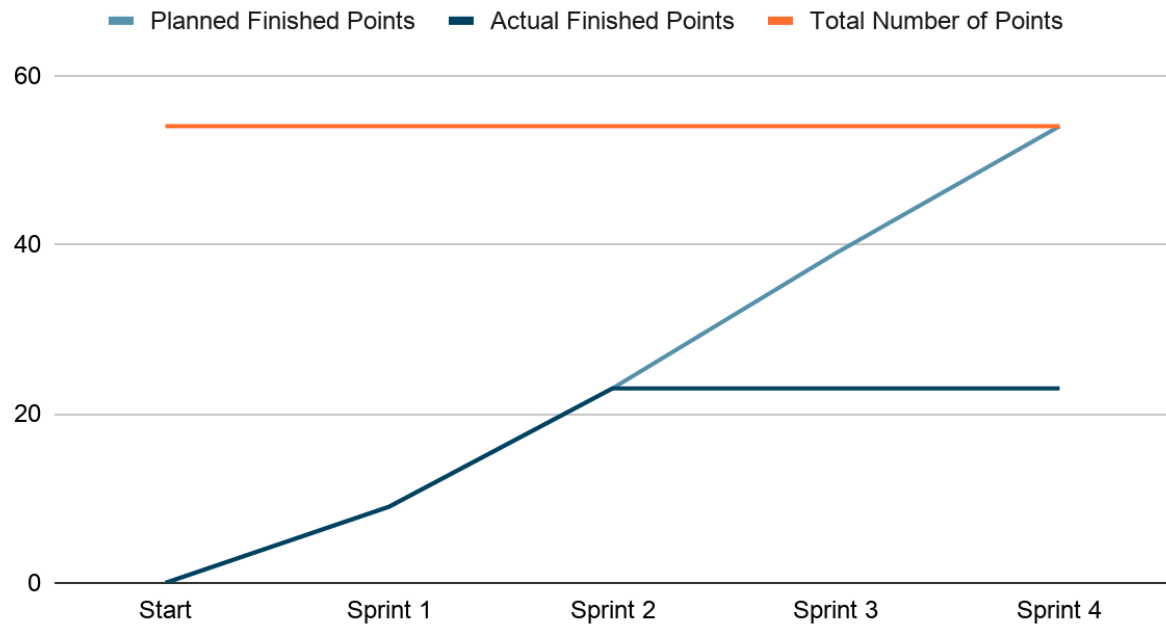

- Add task fields such as sprint ID, title, description, status, priority, assignee, and due date
- Create or update the database table for tasks.
- Work on the Database

Faizan Idrees

- Maintain the Scrum board and also the sprint documentation
- Write the test cases for being able to create, test, move, and filter tasks.
- Check that each user story is acceptable.

Initial Burnup Chart

Points scored

Initial Scrum Board

	Tasks Not Started	Tasks in Progress	Tasks Completed
User Story 1: As a user, I want to create tasks inside a sprint, so that sprint work can be broken down. [3]			1. Create task model fields 2. Create a backend route for adding tasks. 3. Create a task creation form. 4. Connect form to backend.
User Story 2: As a user, I want to edit task title, description, status, priority, assignee, and due date, so that details of tasks can remain accurate. [3]			1. Create an edit task page. 2. Add a backend route to update task details. 3. Test task editing. 4. Allow editing title, description, status, priority, assignee, and due date.

User Story 3: As a user, I want to delete tasks, so that I can remove tasks that are not needed. [2]			1. Add delete button for tasks. 2. Create a backend route to delete tasks. 3. Test deleting tasks. 4. Add confirmation before deleting.
User Story 4: As a user, I want to move a task between To Do, In progress, and Done, so that task progress is tracked. [3]			1. Add the status options for To Do, In Progress, Done. 2. Create backend logic for changing task status. 3. Add buttons/dropdown to move tasks between columns. 4. Test the status updates.
User Story 5: As a user, I want to view tasks grouped into simple status columns, so that I can more quickly see that needs to be started, continued, or what is already complete. [2]			1. Create a task board layout with status columns. 2. Display tasks grouped by To Do, In progress, and Done. 3. Connect board to task data from database.
User Story 6: As a user, I want to filter tasks by assignee, priority, or status, so that certain tasks are more easily found. [3]			1. Add filter controls for assignee, priority, and status. 2. Create backend or frontend filtering logic. 3. Test that the filtered tasks display correctly.
