

**Product Name:** TaskFlask

**Team Name:** The Goatz

**Date:** July 19, 2026

## Actions to Stop Doing

- Waiting until the last minute to complete tasks
- Overcomplicating the user interface
- Skipping testing before the final demo

## Actions to Start Doing

- Testing new features immediately after implementation
- Improving consistency in page styling across the application
- Verifying the application works without external services before demonstrations
- Completing all planned user stories before the sprint ends

## Actions to Keep Doing

- Attending Scrum meetings regularly
- Reviewing each other's code before merging
- Asking teammates for help when blocked

# Work Completed/Not Completed

## Completed User Stories

### User Story 1

As a user, I want to view a sprint report showing sprint goal, dates, progress, completed tasks, incomplete tasks, and recent activity, so that sprint status can be understood. [5]

### User Story 2

As a user, I want to see helpful empty states when there are no projects, sprints, or tasks yet, so that I can see what needs to be done next. [3]

### User Story 3

As a user, I want to receive simple confirmation messages after creating, updating, and deleting actions, so that I can know that my action was successfully seen by the app. [2]

### User Story 4

As a developer, I want to run the test suite and verify the main workflow still works, so that I can find any bugs and get rid of them. [3]

#### User Story 5

As a team, we want to demo the app without relying on outside services, so that we know that the project does not fail because of any service or internet issues. [2]

#### User Story 6

As a user, I want to be able to easily navigate through the app and not get overwhelmed, so that I can use functions more quickly. [3]

#### User Story 7

As a user, I want to see how difficult each task is in terms of points, so that I can organize the order in which tasks are done. [2]

#### User Story 8

As a user, I want to see a burnup chart of the amount of progress the team is making through each progress in points, so that I can see what tasks need to be prioritized. [5]

#### User Story 9

As a user, I can easily access the tasks associated with each sprint from the projects page, so that I don't have to look at each project independently and more quickly see tasks. [3]

### Completed Spikes

#### Spike 1

Research the best way to prepare demo data without relying on outside services.

### Completed Infrastructure Tasks

- Improve the navigation bar, buttons, forms, and page layouts.
- Add story-point support to the task creation and editing workflow.
- Validate story-point values using the team's Fibonacci sequence.
- Update the database and backend to store, retrieve, and total story points.
- Connect burnup chart calculations from the backend to the frontend.
- Create and display the burnup chart.
- Update the projects page so users can quickly access sprint tasks.
- Write and run tests covering navigation, story points, burnup calculations, sprint task access, and edge cases.
- Maintain the Scrum board and sprint documentation.

### Not Completed

No user stories were left un-completed within Sprint 4.

## Work Completion Rate

User Stories Completed per Day:

15 user stories completed / 7 days in a week = 2.143 user stories completed per day.

Ideal Amount of Work Completed per Day:

28 story points planned / 7 days in a week = 4.000 story points completed per day.
